WordPress Tutorial: Local Section Websites

The ANS created a template for Local Sections to use. This template can be customized further to suit the needs of each section. When you receive your development site from ANS IT Department it will look like this - http://localdev1.ans.org/

1. The site will have a few stock photos and Latin text placeholders for you to edit.
2. As admins are added, they will be sent an email from WordPress with their username and a URL to create a password.

From: WordPress <wordpress@committees.ans.org>

To: [Your Name]

Subject: [Name of Section] Your username and password info

3. When you create a password you will be able to log into the development site.
WHAT YOU NEED TO DO

1. **Evaluate your current website.** Work carefully through the pages on your existing website, identifying all of the types of content (standard pages, photo galleries, resource pages, etc.) and noting any areas that need special attention.

2. **Set up environment.** Set up WordPress pages you need and get ready to import. Sections that already have sites will need to migrate the content they wish to keep from their existing site to the WordPress site.

3. **Import content.** Bring over and organize your content, whether via an importing tool, manual entry (for a small amount, when no tool is available) or a custom importing process. Our IT Department can help sections with large amounts of media (PDFs, video, photos libraries etc).

4. **Review website, go live.** Carefully review the import, making adjustments where needed, and then go live. Once you are done editing the development site, our IT Department will make the site live.
DASHBOARD

When logged in, you will be taken to your dashboard. The left column of the dashboard provides quick navigation to every section of your website (pages, posts/blog, media library, appearance)
1. You can create a page just by clicking “Add New”.

2. Name your page in the first Title field, create your content in the Body field and click Publish or Update. Note: After publishing a new page the URL automatically becomes live, but that does not mean that it is in the navigation dropdown of your site. You will have to add pages to your navigation bar for them to appear (See Appearance).
3. The Page Builder helps organize page content efficiently using modules. After clicking on Use Page Builder, you will be able to set up the number and width of the columns on your page. You can add various types of modules to each column you set up.

4. In the webinar we covered a few modules. For a quick review of what each module does, please visit https://kb.wpbeaverbuilder.com/category/51-module-overviews
BLOG POSTS

1. If you have set up a page with the Blog module, you have to use the Posts section to add blog posts to that page.

2. The settings of the blog module determine which posts will be posted to that page. Your site can have multiple blogs.
3. To post to the blog, click on Add New

4. Enter the Title, add content to the Body field, select the category of the page you are posting to, and click Publish.
MEDIA LIBRARY

1. It is quite simple to add files to your site's library. Files can include PDFs, images, video or most document types. To add media, click Add New.

2. You can click and drag items or select files from your computer to bring them over.
3. After files are uploaded they will have a URL which you can use to hyperlink the files anywhere on your site.

<table>
<thead>
<tr>
<th>File name: bookmarks.jpg</th>
<th>File type: image/jpeg</th>
</tr>
</thead>
<tbody>
<tr>
<td>Uploaded on: March 23, 2018</td>
<td>File size: 191 KB</td>
</tr>
<tr>
<td>Dimensions: 1280 × 853</td>
<td></td>
</tr>
</tbody>
</table>

- **Title**: bookmarks

- **Alt Text**: 

- **Description**: 

  Uploaded By: Tracy Coyle

  Uploaded To: SAMPLE STORE
APPEARANCE – Menus

Since the template is already set up using the ANS Branding Guidelines, it is recommended that you don’t edit the appearance of the site except for the navigation tabs.

1. To add pages to the navigation tab go to Appearance/Menus

2. In the Menu section you can rename tabs on your site.
3. You can also add pages to the navigation menu and drag them up or down in the order you would like them to appear on the site.
PLUGINS

If you are not completely satisfied with what the template provides, there are many free plugins that you can add to enhance your site.

A few plugins that have been used by other sections and divisions include:

- Formidable Forms - Quickly and easily create drag-and-drop forms
- Publish to Schedule – Schedule posts to go live on a specified date
- The Events Calendar - Lets you easily manage and share events.
- Embed Any Document - Lets you upload and embed your documents easily in your WordPress website without any additional browser plugins like Flash or Acrobat reader.
- TablePress - Embed beautiful and feature-rich tables into your posts and pages, without having to write code.
- WooCommerce - eCommerce plugin that helps you sell anything.
ROYALTY-FREE IMAGES (LIBRARY)

When using images for social media, websites, and other section communications you should always make sure they are not copyright to avoid any copyright infringements. The easiest way to avoid this is to use your own photos taken at meetings and events or reach out to a local lab or company/organization and ask if they have any images that can be used. Usually, companies are happy to share photos if you give credit notation.

When in doubt always ask permission and get it in writing!

While there are not a lot of good nuclear focused images available for free stock imagery can be licensed/purchased at affordable prices ($10-$15)
